ALLIANCE MEMBER

Solaga

Solaga novel biofilter systems are transforming grey urban areas into green productive areas for clean air and energy.

Solaga UG haftungsbeschränkt develops and commercializes microalgal products and production processes. Having the wide application set of nature, we are involved in project ranging from architecture, decentralized energy production, decarbonization up to marketing novel foods. Key innovation of solaga is a patented technology for turning climate gas CO₂ into burnable methane using immobilized microalgae.

C02 BIOFILTERS FOR URBAN SPACES

DESCRIPTION

Solaga builds living urban architecture that uses photosynthesis for C02 removal and clean air.
